Meer Humayu

Bhopal, MP | +91 9685152725 | meerhumayu6@gmail.com | github.com/Meer06h | linkedin.com/in/meer-humayu

CS undergrad (7th semester) with a genuine interest in AI/ML — currently exploring deep learning and building full-stack projects to understand systems end to end. Strong in Python and DSA; comfortable picking things apart and putting them back together.

EDUCATION

B.Tech — Computer Science & Engineering *2023 - 2027*

Sagar Institute of Science and Technology (SISTec), Bhopal

Coursework: Data Structures & Algorithms · OOP · DBMS · Operating Systems · Computer Networks

PROJECTS

Kaamgar — Cooperative Workforce OS ***In Progress***

Tech: *React, Tailwind CSS, Node.js, Express.js, PostgreSQL, Python, FastAPI*

- Building a workforce OS for local service cooperatives — handles customer bookings, worker allocation, and full job lifecycle tracking in one place.
- Designed a "Verified Work Infrastructure" that generates structured Job Records and digital Work Passports so gig workers can build a real, evidence-backed work history.
- Wiring in a Python + FastAPI microservice that uses AI to assess job completion photos and flags uncertain cases for human review.
- Separate REST API layer in Node.js + Express.js with PostgreSQL keeping cooperative data properly isolated at the storage level.

EcoSwap — Sustainable Upcycling Marketplace

Tech: *React (Vite), Node.js, Express.js, MongoDB, Gemini Vision API, Socket.io, Cloudinary, JWT*

- Built a platform connecting waste generators with local artisans — the whole point was to make upcycling actually convenient rather than aspirational.
- Integrated Google Gemini Vision API to classify uploaded waste images and suggest upcycling ideas automatically — didn't want users to have to describe their waste themselves.
- Added Socket.io for live bidding and negotiation between users and artisans, plus a gamified "Eco-Score" to track environmental impact per user.
- Handled auth with JWT, image hosting via Cloudinary, and structured the backend as a clean 3-tier MVC.

Groundwater Level Monitoring System

Tech: *React.js, Node.js, Express.js, MongoDB Atlas*

- Full-stack MERN system for real-time groundwater monitoring — built the backend APIs, MongoDB Atlas schemas, and React dashboards end to end.
- Took this to Smart India Hackathon 2025 as team lead; the national-level problem statement was around data accessibility for policymakers.

TECHNICAL SKILLS

AI / ML: Python, CNNs, ANNs, NLP basics, FastAPI, and AI API integration.

Languages: Python, JavaScript (ES6+), Java, C++, and SQL.

Frontend: React.js, Tailwind CSS, Vite, HTML5, and CSS3.

Backend: Node.js, Express.js, REST APIs, and MVC architecture.

Databases: MongoDB, MongoDB Atlas, PostgreSQL, and MySQL.

Tools: Git, GitHub, Postman, AWS, and VS Code.

LEADERSHIP & HACKATHONS

Smart India Hackathon (SIH) 2025 ***Team Leader*** *2025*

Led team *The Streamliners* — cleared internal rounds and represented college nationally. Built the groundwater monitoring solution end to end with the team.

Samadhan 2.0 National Hackathon ***Team Leader*** *Sept. 2025*

Team DevVerse — led ideation and system design, shipped a working full-stack prototype within the 24-hour window at national level.

AICTE IDE Bootcamp — MITS, Gwalior ***Selected*** *Apr. 2026*

One of few students selected to attend in person. Worked through product ideation, prototyping cycles, and startup methodology over the full programme.

Wadhwani Ignite Bootcamp — Idea to Plan ***Certified*** *Apr. 23, 2026*

18-hour certified programme by Wadhwani Foundation — covered ideation, business modeling, prototyping, and financial planning.
